

# Research Outputs

## Online Peer Reviews

# Research Output Management

**ResearchMaster's Research Outputs** module allows you to easily manage and monitor the progress of Research Outputs from the initial notification of new research outputs, through managing and tracking the peer review process, and to collating data for internal and external reporting purposes.

Our online verification management enables you to minimise your administrative overheads and streamline processes and reporting.

## Research Outputs/Publications

Maintain details of research outputs resulting from contributions of individuals within the organisation. Our highly configurable system allows multiple research output categories and classifications to be managed and maintained for various collection purposes. With the ability to link research outputs to projects and contracts, users can access related details and documents easily and in one place.

## Online Peer Review Management

Track peer reviews through all stages of the process, and easily re-assign reviewers as required. Automate email notifications to authors, contributors, supervisors and the research office alerting them to their tasks in the review process.

## Quality Assurance Process

Minimise data entry and errors by pre-populating existing information from the other records into the online forms. Automatically update a researcher's profile through linking multiple IDs like ORCID ID and researcher ID.

## ERA Assist

Specially designed to assist in collecting and collating data for the ARC ERA submission, ERA Assist enables automated tracking of eligible researchers and eligible research outputs as well as validation of details against the ARC data requirements for submission.

Configurable system processes accommodate changes in the ARC's rules and guidelines for each ERA round.

## Integrate

Import new research outputs from external abstract and citation databases and reduce administrative involvement.
